

A CUSTOM DESIGNED PRESCRIPTION SAFETY EYEWEAR COST CONTROLLED SOLUTION

Safety Source will work with you to design a program that fits your budget and fulfills the eye protection needs of your employees.

With Safety Source you only choose what you need!

PROGRAM PARAMETERS

Employees will need to have a recent (within two years) copy of their prescription (refraction) as provided to them by their eye doctor

Company will choose among three frame selection options

- 1. Allow only frames under a specific price (example under \$26.00 Basic Group, \$48.00 Standard Group)
- 2. Allow all Frame choices with no price restrictions (From Basic Group through Premium Group)
- 3. Establish a limited selection of frames to match specific company requirements (Brand and Function)

Polycarbonate Lens Material is the recommended and most cost effective. Glass and CR39 is also available. All will be in compliance with the American National Standard Z-87 for safety lenses.

Choose side shields from either permanently attached, removable or "Wrap-Around" frames with integral side shields designed into the frame

An allowable progressive lens decision should be made. Best Practice suggests matching the Safety Lens design to the individual's streetwear progressive lens design. Alternatively only lower cost Bi-Focal lenses could be allowed.

LENS OPTIONS

The program administrator can select from among the many offerings of basic and special options. The recommended lens choice is Polycarbonate which has intrinsic UV protection and basic scratch resistance. Glass and CR 39 lenses can be chosen but the availability of product to satisfy some prescriptions is limited.

Review the Special Options page and decide which, if any, will be allowed. That determination will be communicated to the Dispensing Optician(s) servicing your program.

DISPENSING SERVICES

Safety Source offers On-Site dispensing services and guided Optical Outlet service. Both will provide the necessary fitting of Prescription Safety Eyewear in keeping with your individual program outline. Approved frame choices will be available for employee selection.

The Optical Professional will complete the SRX order form with a copy provided to the administrator.

Completed Safety Eyewear will be sent to the administrator for distribution.

Follow up fitting and adjustment can be provided as necessary.

DISPENSING SERVICES (Continued)

The Safety Source invoice will show pricing by individual and indicate all appropriate chosen items for their prescription. For example, Lens Type, Frame Choice, Selected Options (as allowed by a companies program) and any unique requirements specific to the individuals prescription requirement.

The On-Site dispensing program is available in Rhode Island, Massachusetts and southern New Hampshire. The company Optician will meet with employees approved for service and assist them in the selection and fitting of their company approved frames and lens choice. The Optician will complete the SRX order form leaving a copy with the program administrator and ordering the manufacturing of the employees prescription. A standard charge of \$70.00 per hour is separately billed to the company pro-rated every 15 minutes after the minimum one hour charge.

Optical Outlets are locally available for program guided service to approved employees. The chosen outlet will be provided with appropriate frame samples and individual company program guidelines. They will complete the SRX order form returning it with the employee to the employer who will approve and place an order with Safety Source. Individual Dispensing Fees will vary by Optical Outlet.

REPORTING

Safety Source will provide upon request all required reports showing individuals served, product usage, dates, dollar value and similar information to assist the employer in budget planning.

PRICING

A Comprehensive price list showing all available choices is available. Pricing is current as of December 2019. With Safety Source pricing is exclusive to the employers chosen program. Only those frames and lens choices that are approved will be included. An available option, though, is to establish an allowance limit with any costs above that limit collected or billed to the individual employee. Check or Credit Card employee payment is required for this option.

Shipping and Handling charge is prepaid by Safety Source and added to the invoice.
